

Cylinders

Our cylinders are manufactured and tested to meet the most stringent recent standards, providing it with comfort and safety of your home. In addition, our patented cylinder range offers additional protection against unauthorized key duplication. They offer greater resistance against break-in, anti-bumping and other forms of manipulation of locks.

Padlocks

Whatever your requirements are, at Yale we have introduced a performance rating on residential padlocks to help you choose the right padlock. Our range of security padlocks are tested to EN12320 padlock standard for security and corrosion resistance. The range includes open and closed variants to suit the particular application, together with a choice of hardened steel, stainless steel, boron, and molybdenum shackle.

Door Handles

Yale are proud to introduce a fresh range of handles that combines quality, design, style and security, delivered in one attractive package to suit different lifestyles

Lock Cases

Yale Mortice locks are installed inside the door, and there are a range of sizes, security levels and functions which you need to consider before you make your purchase. Deadlocks features a bolt which is operated by a key, and is often used in conjunction with a nightlatch. Sashlocks features a bolt and latch and is for use with door handles.
