Protect what matters with **Yale** security solutions

An ASSA ABLOY Group brand

ASSA ABLOY

The world's favorite lock since **1843**

About Yale

Linus Yale

Created in 1843, Yale is one of the oldest international brands in the world and probably the best-known name in the locking industry. The Yale history captures major innovations that have marked the evolution not just of Yale, but of the entire locking industry.

At Yale, we take great pride in our beginnings. Everything we are today, we owe to the inspirational ingenuity of Linus Yale Senior and Linus Yale Junior.

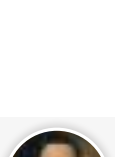
Yale is a part of the ASSA ABLOY Group. At ASSA ABLOY, we believe that freedom enriches people and that fear makes us poorer. To realize freedom, we must firstly feel safe and secure. That's why the ASSA ABLOY Group of companies is committed to creating high quality door opening solutions.

1843 – First Lock Patent from Linus Yale Sr. (Combination Lock, US3312).

1844 – Patent from Linus Yale Sr. for a door lock (US3630) with circular pin tumblers.

1847 – Linus Yale Sr. built a small lock factory in Newport, USA.

1850 – Linus Yale Sr.'s son joined his father in the business.



1851 – Yale patented his design for the famous pin tumbler cylinder padlock - still used around the world today.

Yale patented a safety lock for use in banks.

1857 – Granted patents between 1857 and 1865, Yale finally succeeded in creating his most important invention – the Yale cylinder lock. (June 27, 1865, US patent 48475 - round cylinder with five pin tumblers in a line and flat key) Linus Yale Jr. transformed the locking industry forever with his many breakthrough inventions.

1857-65 – Relying on Yale patents, Yale's sterling name, and his native ingenuity, Linus Yale Junior and his colleague, Henry Towne, established the Yale & Towne Company in Stanford, Connecticut, at the time employing 35 people.

1868 – After the death of Linus Yale Junior, his son, John B. Yale, joined Henry Towne and helped grow the company from a small shop into a giant manufacturing enterprise.

1879 – A line of padlocks was introduced.

YALE PIN TUMBLER PADLOCK.

1894 – Yale & Towne established a sales branch in Britain (first British plant).

1903 – Towne began stamping the name Yale on the padlocks.

1843-2019

STILL PIONEERING

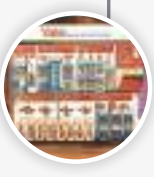
Yale is the brand behind locks of every design and function in over 125 countries, since more than 175 years.

All over the world, people are actively securing all they care about; their home, their family, their personal belongings or their business with the name they trust the most, Yale. That's why we proudly say that Yale is **"the world's favorite lock".**

Our overall aim is to make our customers feel so safe and secure that they are free to enjoy their life fully, free of worries and free to choose what they want to do.

1929 — Yale purchased the UK largest lock maker H. & T. Vaughan Ltd.

20TH C — By the early 20th century, they employed more than 12,000 staff and had expanded into the wider world. Throughout the 20th century purchases, acquisitions and joint ventures with brands as Guli, Parkes and C E Marshall have made Yale locks Well-known worldwide.



1963 — Eaton acquired Yale & Towne Manufacturing Co.

1991 — Williams Holdings acquires Yale.

2000 — In August 2000 Yale was purchased by the ASSA ABLOY Group - the world's leading lock group.

2005 — Yale became a global brand.

2010 — Launch of the first Smart Door Lock in EMEA – Keyfree, for the UK market.

2011 — Launch of Doorman in Scandinavia which is the start of a success story for our Smart Door Lock products.

2016 — Yale Smart Living range is launched in various countries across EMEA. Yale Smart Living is an ingredient brand gathering our range of connected products. It is a range of connected, smart security devices such as alarms and digital door locks and viewers that allow you to protect your home and loved ones from almost anywhere in the world through intuitive user-friendly apps.

2018 — Launch of CCTV in EMEA, part of the Yale Smart Living ecosystem.

Yale in the Middle East 1940-2019

About Yale Middle East

Yale ME is the market leader in residential security solutions and offers an extensive range of products catering to the varied demands of the market. The products are handpicked from millions of product combinations globally, ranging from mechanical locks, smart products like alarms and cameras to door solutions and connected smart locks; and adapted to meet the diverse needs of consumers across the Middle East region. Yale first set foot in the Middle East with Lebanon in 1940, and today, has physical presence in 14 countries through some of the region's top distributors, and online presence with key ecommerce accounts.

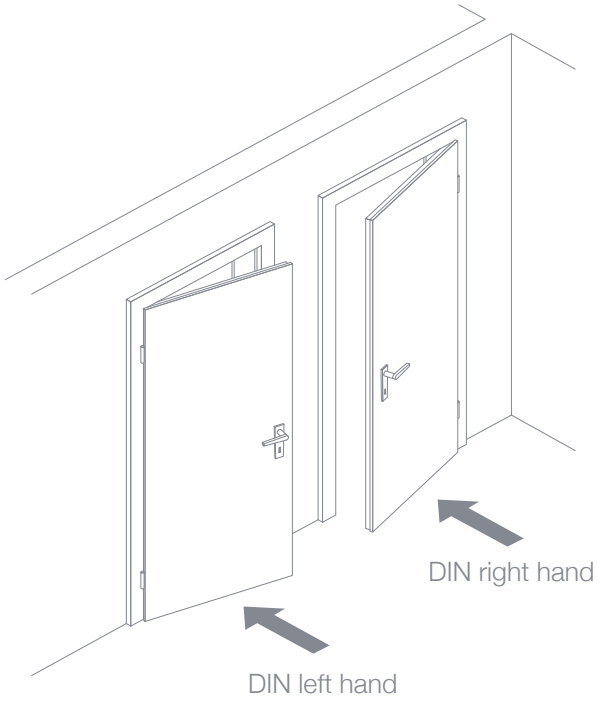
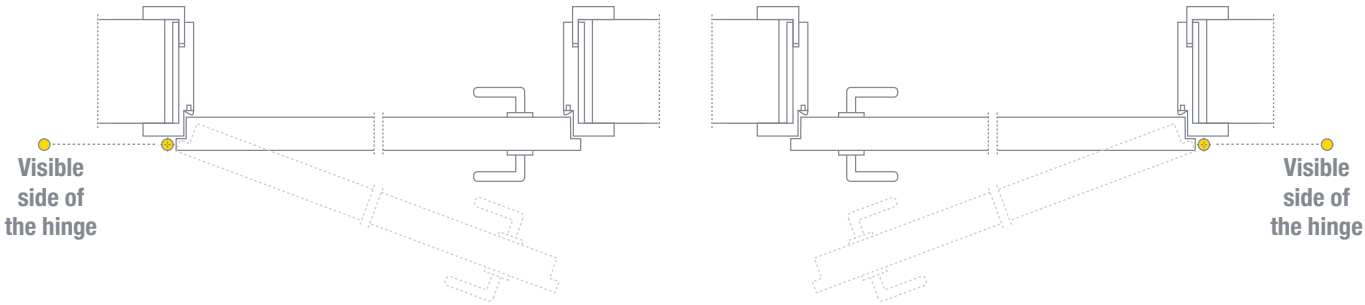
Door Hinges

Door Direction

Depending on the pivot direction of a door, a door is classified as a left and right hand door. The door direction or side definition is according to the German standard DIN 107. Please note that this standard is different as compared to ANSI definition for left and right hand. Visible position of the door hinges on the left = DIN left Visible position of the door hinges on the right = DIN right. Furthermore, common definitions derived from the access direction.





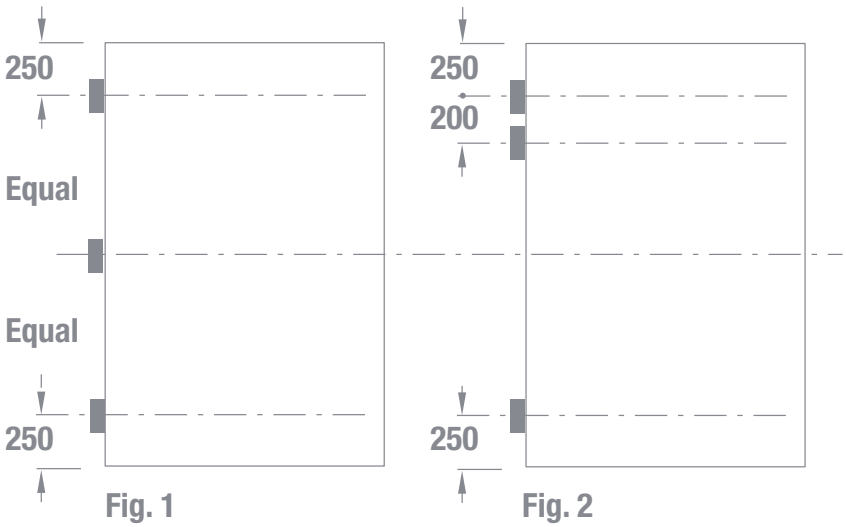
DIN LEFT **DIN RIGHT**

Hinge Position Recommendation

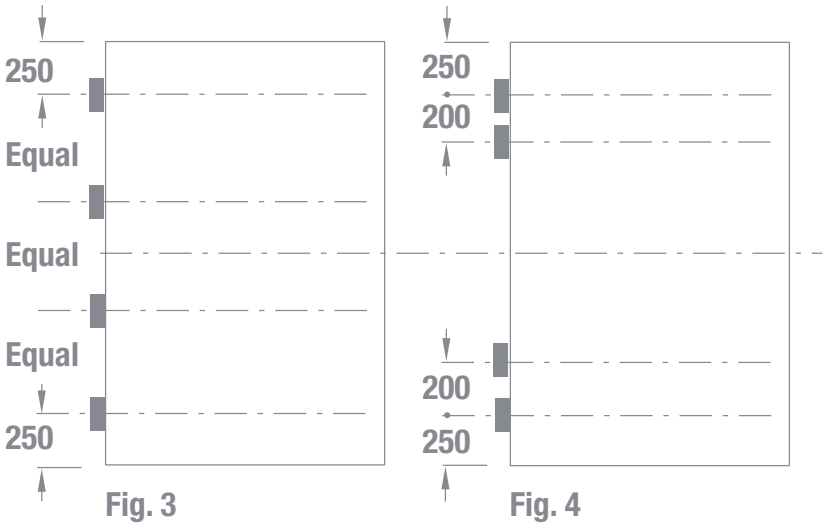
In the ENstandard for hinges (EN1935:2002) it is not specified where a hinge has to be fixed exactly. The recommendation shown below is only a guide and should be proved always as per the door specifications.

- Figure 1 – Use for medium weight doors. The benefit of this solution is that door will be held straight and wont warp.
- Figure 2 – Use for higher weight doors. This alternative is recommended when door closing device is fixed on the door.
- Figure 3 – Use for door height over 2,100mm. This solution is for constructions with a high risk of door warping.
- Figure 4 – Use for door height over 2,100mm. This version is especially recommended when door closers are fitted on the door.

Doors up to 2,100mm height (3 hinges)



Doors over 2,100mm height (4 hinges)



Adjusting the Door Weight

Normally, three hinges are fitted to each door. Their positions are determined by the weight of the door and its resistance to warping or whipping. Hinge specification is also determined by the adjusted door weight (based on the actual weight supplied by the manufacturer). The factors by which the door mass has to be adjusted for excessive widths of door are calculated by dividing the door height by its width. For a factor of 2 or greater, no allowance has to be made. When the factor is less than 2, the door mass has to be increased by the value required to bring the factor to 2 expressed as a percentage. These percentages are shown in the side loading calculations table shown on the right.

Door size		Factor	Normal increase of Door Height mass of door leaf %
Door height mm	Door width mm		
2,000mm	1,000	2.00	0
	1,050	1.90	10
	1,100	1.82	18
	1,150	1.74	26
	1,200	1.66	33
	1,250	1.60	40

Doors of excess width, please refer to side loading calculation table		
Actual door weight	Door closer + 20%	= Adjusted door weight
	Door closer (Backcheck) + 75%	
	Extra heavy use + 10%	
	Light use - 10%	

Additional tables to aid understanding of EN1935 2002
Digit 8 - hinge grade, regarding information on door mass and test cycles:

Table B shows the mass range of typical doors

Door type	Mass kg	Duty
Cupboard, wardrobe, cabinet, louvered doors and shutters	3.0–10.0	Light
Light internal large wardrobe and large louvered doors	10.0–17.5	Light
Medium internal doors	17.5–25.0	Medium
Heavy internal doors	25.0–37.5	Medium
Heavy internal doors	40.0–60.0	Heavy
Oversize or special external doors	55.0–110.0	Heavy

Table C gives estimated number of operations of typical doors and use. Failure to assess the likely frequency of operation of a door could lead to the specification of inadequate hinges and subsequent problems.

Door type	Cycles / day	Cycles / annum
High use/high duty situations:		
Large department store entrance	5,000	1,500,000
Large office building entrance	4,000	920,000
Cinema or theatre entrance	1,300	455,000
School entrance	1,250	225,000
Entrance door to school toilets	1,250	225,000
City centre shop entrance	1,000	300,000
Large city bank entrance	1,000	250,000
School corridor fire door	600	108,000
Town bank entrance	500	150,000
City centre restaurant entrance	500	150,000
Large office corridor fire door	450	104,000
Town centre shop entrance	400	120,000
Large office or factory toilet entrance	400	92,000
Hospital ward door	350	128,000

Door type	Cycles / day	Cycles / annum
Medium use/medium duty situations:		
School classroom door	80	15,000
Office door	75	18,000
Store toilet door	60	18,000
Dwelling front entrance	12	4,400
Dwelling rear or side door	15	5,400

Standards

This standard provides details on product types, classification by use, test cycles, door mass, corrosion resistance, as well as defl nitions, product performance requirements, test apparatus, test methods and marking of products. In addition, the published standard includes annexes with details for special applications.

Scope

This European standard specifies requirements for single-axis hinges for windows and **doors opening in one direction only,** whose **rotation axis is no more than 30mm from the face of the sash or door.** It covers both fixed pin and lift-off hinges, and contains additional requirements for hinges intended for use on fire doors.

Digit 1 - Category of use

Four categories of use are identified:

- grade 1: light duty
- grade 2: medium duty
- grade 3: heavy duty
- grade 4: severe duty

Door type	Mass kg	Duty
Cupboard, wardrobe, cabinet, louvered doors and shutters	3.0–10.0	Light
Light internal large wardrobe and large louvered doors	10.0–17.5	Light
Medium internal doors	17.5–25.0	Medium
Heavy internal doors	25.0–37.5	Medium
Heavy internal doors	40.0–60.0	Heavy
Oversize or special external doors	55.0–110.0	Heavy

Digit 2 - Durability

Three grades are identified for single-axis hinges manufactured to this European standard:

- grade 3: 10,000 test cycles, for light duty hinges on windows only
- grade 4: 25.000 test cycles, for light duty hinges on windows and doors
- grade 7: 200,000 test cycles, for medium, heavy and severe duty hinges on doors only

Digit 3 - Test Door Mass

Eight door mass grades related to single-axis hinges are identified in this European standard as shown in Table 1 below.

Test door mass grade	Door mass
0	10 kg
1	20 kg
2	40 kg
3	60 kg
4	80 kg
5	100 kg
6	120 kg
7	160 kg

Digit 4 — Suitability for firelsmoke door use

Four categories of use are identified:

- grade 0: not suitable forfirei'smoke resistant door assemblies
- grade 1: suitable for fire/smoke resistant door assemblies subject to satisfactory assessment of the contribution of the single-axis hinge to the fire resistance of the specified fire/smoke door assemblies.
- Such assessmentis beyond the scope of this European standard (see EN 1634-1).

Digit 5— Safety

- Single-axis hinges are required to satisfy the essential requirements of safety in use. Therefore, only grade 1 is identified

Digit 6 — Corrosion Resistance

Five grades of corrosion resistance are identified in accordance with EN 1870:

- grade 0: no defined corrosion resistance.
- grade 1: mild resistance.
- grade 2: moderate resistance.
- grade 3: high resistance.

Digit 7 — Security

Two grades of security are identified for single-axis hinges:

- grade 0: not suitable for use on burglar-resistant door assemblies
- grade 1 : suitable for applications requiring a degree of security. Annex C of this European standard details the hinge grade to use for the level of security required

Digit 8 — Hinge Grade

Fourteen grades are identified in this European standard and are detailed in Table 2 below. The full classification is shown in the standard

Hinge Grade	Usage	Test cycles	Door mass
1	Window	10 000	10 kg
2	Window	10 000	20 kg
3	Window/Door	25 000	20 kg
4	Door	200 000	20 kg
5	Window	10 000	40 kg
6	Window/Door	25 000	40 kg
7	Door	200 000	40 kg
8	Window	10 000	60 kg
9	Window/Door	25 000	60 kg
10	Door	200 000	80 kg
11	Door	200 000	80 kg
12	Door	200 000	100 kg
13	Door	200 000	120 kg
14	Door	200 000	160 kg

Certificate of Constancy of Performance for Hinges

Certificate of Constancy of Performance

0359-CPR-00355

Intertek

In compliance with Regulation 305/2011/EU of the European Parliament and of the Council of 9 March 2011 (the Construction Products Regulation), this certificate[T4] applies to the construction product(s).

Product(s): Single axis hinges
(refer to attached appendix for details and conditions)

Placed on the market under the trade mark of: ASSA ABLOY ITALIA S.p.A.
Via Salvatore Quasimodo, 136, 0014 Rome, 40017, ITALY

Produced in the manufacturing plant(s): A003

Intended use: On fire/smoke compartmentation doors fitted with door closing devices (to enable such doors to close reliably and thus achieve self closing in the event of fire)

This certificate attests that all provisions concerning the assessment and verification of constancy of performance described in Annex ZA of the standard(s):

EN 1935:2002/AC:2003

Under system 1 for the performance set out in this certificate are applied and that the performance of the construction product is assessed to remain constant.

This certificate was first issued on 17 February 2015 under CPR (305/2011) and updated on 26th November 2015 and will remain valid as long as neither the harmonised standard, the construction product, the AVCP methods nor the manufacturing conditions in the plant are modified significantly, unless suspended or withdrawn by the notified product certification body.

CE
0359

The issued document and statement(s) herein makes reference only to a presumption of conformity in accordance with the CPR Regulations EU 305/2011 (as amended). However, it is the manufacturer's or their authorised representative's sole responsibility to affix the CE logo and, by doing so, confirms full compliance and conformity to all other European mandatory directives and regulations that may also apply.

Table A2. Product classification for single axis hinges (EN 1935:2002/AC:2003) from ASSA ABLOY ITALIA S.p.A.[a,c]

Product Classification							
4	7	6	1[b]	1	4	0	13

Notes.

a. The single axis hinges shall be installed in accordance with the installation instructions for the product(s)

b. Digit 4 grade "1" was based on the test result from fire resistance test(s) (refer to Table A4).

c. This certificate of constancy of performance, refers to the requirements for the product(s) described under the CPR. There may be other European Directives, where requirements need to be declared before CE marking can be affixed by the manufacturer or their authorised representative

Supporting test reports for this certificate are as follows:

Certificate of Constancy of Performance for Hinges

Certificate of Constancy of Performance

0359-CPR-00355

Intertek

Table A5. Single axis hinges (EN 1935:2002/AC:2003) according to the Annex ZA, Table ZA.1.

Product:	Single-axis hinges as defined in clause 1 of this standard.	
Intended uses:	On fire/smoke compartmentation doors fitted with door closing devices (to enable such doors to close reliably and thus achieve self closing in the event of fire)	
Requirement / characteristic	**Requirement clauses in this European Standard**	**Results**
Self closing	5.1 Initial friction torque	Less than 4,0 Nm with door mass 120 kg
	5.2 static Load - Load deformation	Pass with a displacement under load: - Lateral < 4 mm; - Vertical < 2 mm And a residual displacement after unloading: - Lateral < 0,2 mm; - Vertical < 0,3 mm
	5.2 static Load - Overload	Pass
	5.3 Shear strength	Pass No breakage and cracking Lateral deformation under loading < 3 mm Additional lateral and vertical displacement after unloading < 1 mm
	5.6 Hinges for use on fire-resistant and/or smoke-control doors	Grade 1: suitable for use on fire/smoke resistant door assemblies
Durability	5.4 Durability	Pass (200,000 cycles) Maximum wear: - Lateral < 0,2 mm - Vertical < 1 mm Maximum frictional torque: - After 20 cycles and completion of 200,000 cycles less than 4,0 Nm.
	5.5 Corrosion resistance	Grade 4, Neutral Salt Spray (NSS) – 240 hours
Dangerous substances	Note 1 of ZA 1	No dangerous substances declared for this product/intended use

SS 304 Hinges

Stainless steel butt hinges

4 (1/4)	7 (3/4/7)	6 (1-8)	1[b] (0/1)	1 (1)	4 (0-4)	0 (0/1)	13 (1-14)

High quality stainless steel butt hinges.

Specifications:
- Butt hinge with ball bearings
- Stainless steel AISI 304
- Square corners
- Can be used on doors up to 120 kg

Features:
- CE marked
- Tested to EN1935:2002 class 13
- Suitable for fire and smoke resistant doors, tested to EN1634-1:2014
- Available in Stainless Steel Matt, Stainless Steel Polish and Polish Brass finishes

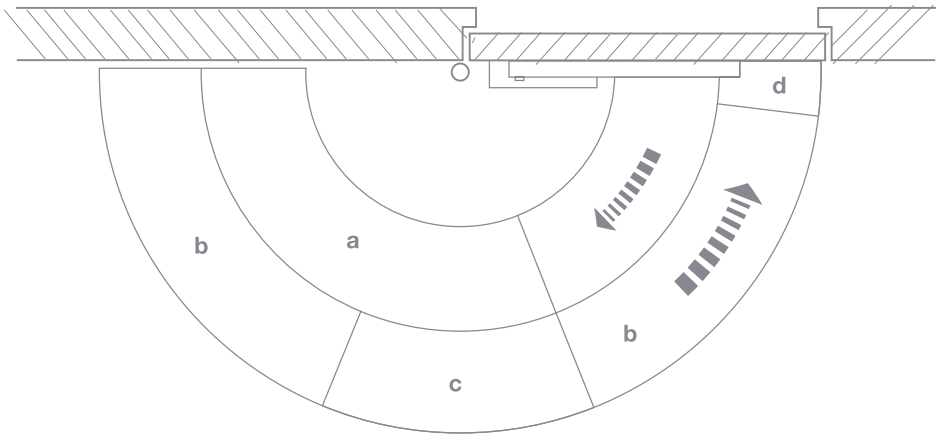
Door Closers

Door Closer

The door closers in this catalogue are divided into the following groups:
- Surface door closer with hold open & without hold open

Door closer functions in the door operating range



a Backcheck
With backcheck, the swing of a forcefully opened door (manually or for example by gusts of wind) is reduced. Damage to the door or wall are therefore minimised or eliminated.

b Closing speed
The exact setting of the closing speed guarantees a controlled closing of the door leaf.

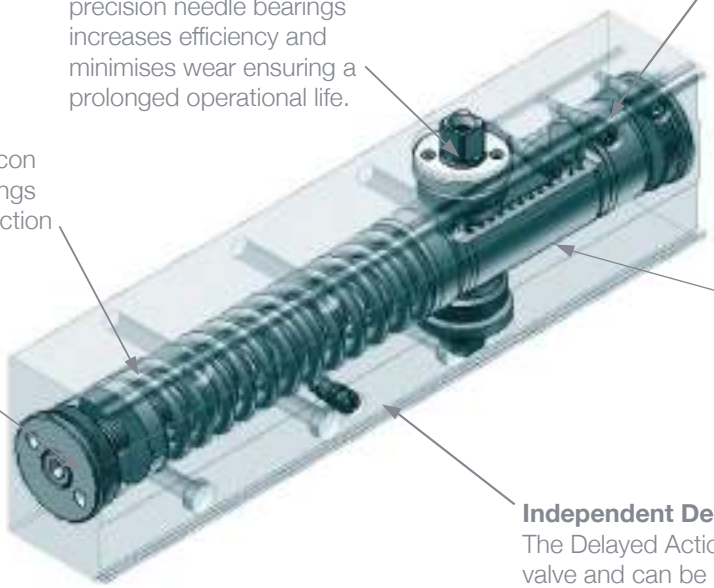
c Closing delay
The closing delay increases the closing time so that, for example, persons carrying luggage or bulky items, mothers with prams, elderly persons, etc. have sufficient time to walk through the door.

d Latching action
The latching action controls the closing of the door and ensures, the lock closes reliably. Therefore the door closer increases the speed of the door . The hydraulic latching action is reducing the speed of the door to achieve a softer closing of the door.

Pinion Needle Bearings
High grade pinion with precision needle bearings increases efficiency and minimises wear ensuring a prolonged operational life.

Independently Adjustable Hydraulic Valves
Backcheck.
Latching speed.
Closing speed.

Spring
Highest grade silicon chrome steel springs provide smooth action and long life.



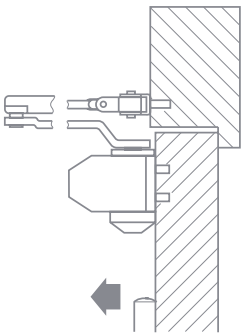
Rack & Pinion
High grade alloy steel rack and pinion delivers a smooth and reliable action for the life of the door closer.

Power Adjustment Screw
The spring strength of the unit can be adjusted to the requirements of a specific door simply by turning the adjustment screw with the hex key supplied.

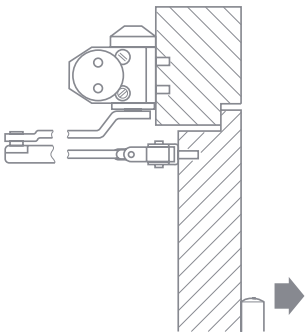
Independent Delayed Action Valve
The Delayed Action is an independent valve and can be adjusted as part of the closing sequence or independently adjusted for delayed action.

Overload Protection
Pressure relief valves are fitted to all units to prevent closer damage in the event of excessive force.

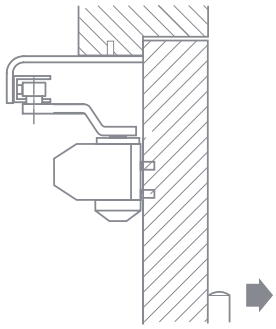
Fixing types



Standard installation
(Door leaf installation) on the pull side



Overhead installation
(Transom fixing) on the push side



Parallel arm installation
On push side

Standards relevant to the architectural hardware industry

Standards

There are two standards currently in existence for door closing devices:
EN1154:1997 - Mechanical closers
EN1155:1997 - Electronically controlled closers
EN1154:1997 - Controlled door closing devices - requirements and test methods.

Scope

The standard covers all controlled surface mounted, concealed, or transom mounted closers as well as both single and double action floor springs.

These standards are shown in summary below in detail at the back of this catalogue. Attention should be paid to Digit 3, which deals with the power size and door width. Where applicable we have shown the relevant classification code using DHF graphic icons in this section.

Classification

Digit 1 - Category of use

For all internal and external doors for use by the public, and others, with little incentive to take care, i.e. where there is some chance of misuse of the door.

Grade 3: For closing doors from at least 105° open

Grade 4: For closing doors from 180° open

Note 1: Grade 4 classification assumes standard installation according to the manufacturer's instructions.

Note 2: For applications subject to extremes of abuse, or for particular limitations of opening angle, door closers incorporating backcheck function or provision of a separate door stop should be considered.

Digit 2 - Number of test cycles

Only one test duration is identified for the door closing device manufactured to this standard: Grade 8: 500,000 cycles

Digit 3 - Test door mass/size

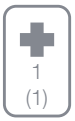
Seven test door mass grades and related door closer power sizes are identified according to below table of this standard. Where a door closer provides a range of power sizes both the minimum and maximum sizes shall be identified.

TEST DOOR MASS AND RECOMMENDED DOOR WIDTHS		
Power size of closer	**Max. mass of leaf**	**Width of test door leaf**
1	20 kg	<750mm
2	40 kg	850mm
3	60 kg	950mm
4	80 kg	1,100mm
5	100 kg	1,250mm
6	120 kg	1,400mm
7	160 kg	1,600mm

Digit 4 - Fire behaviour

Grade 0: Not suitable for use on fire/smoke door assemblies

Grade 1: Suitable for use on fire/smoke door assemblies, subject to satisfactory assessment of the contribution of the emergency device to the fire resistance of specified fire/smoke door assemblies



Digit 5 - Safety

All door closers are required to satisfy the Essential Requirement of safety in use contained in the Construction Products Directive by the EU. Therefore only **Grade 1** is identified.

Digit 6 - Corrosion resistance

Five grades are identified according to EN1670:

Grade 0: No defined corrosion resistance

Grade 1: Low resistance

Grade 2: Moderate resistance

Grade 3: High resistance

Grade 4: Very high resistance

Classification Code

:3:8:2/5:0:1:0

EXAMPLE:

The following marking denotes a closer capable of opening to at least 105°, and with a range of power sizes from size 2 to size 5. Note that as the 4th digit is zero, such a closer would not be suitable for fire door use.

Fire resisting doors

EN1154 makes the following recommendations as to the feature considered necessary for such devices when they are fitted to fire and smoke resisting doors.

a) The door closer when installed in accordance with the manufacturer's installation instruction shall be capable of closing the test door from any angle to which it may be opened.

b) Due to their low closing moments, door closers sizes 1 and 2 are not considered suitable for use on fire/smoke resisting door assemblies. Door closers with adjustable closing force shall be capable of adjustment to at least power size 3.

c) The door closer shall not include a hold open device unless it is electrically powered device in accordance with **EN1155**.

d) Control regulators shall be either concealed or operable only by means of a tool.

e) The design of a door closer shall be such that it is not possible to inhibit its closing action in any way without the use of a tool.

f) Any incorporated delayed action function shall be capable of adjustment to less than 25 seconds between the door closing angle of 120° and the end of the delay zone.

g) The door closer representative of its model shall have been incorporated in a door assembly that has satisfied the appropriate criteria of a fire test. The test shall have been on a full size assembly in accordance with **EN1634-1**.

EN1155: 1997 - Electrically powered hold open devices for swing doors - requirements and test methods

Scope

The standard specifies requirements for separate electrically powered hold-open devices and also for hold-open mechanisms incorporated in a door closer. Whilst these devices may incorporate smoke or fire detection elements, the performance of these particular elements is outside the scope of EN1155.

CE conformity

Where a door closing device has a CE certificate of conformity, this will be shown. Hence, it is stated in 8300 that all fire doors must have closing devices that are CE marked.

Fire resistance and smoke control

Tested for fire resistant and smoke control doors.

The use of a hold-open device on fire resistant and smoke control doors are not permitted or they are not tested for resistance and smoke control.

We give below a guide to the terminology used in connection with door closing devices.

Backcheck

A device built into the closer that checks the outward swing of the door. The backcheck damping is inversely proportional to the speed of the outward swing of the door. It should not be regarded as a door stop.

Closing speed

The speed with which the door is closed. Normally adjustable.

Closing force

The power that the closer exerts to close the door. Measured in the ENstandard from 1-6. See table below.

Latching action

The door movement becomes accelerated in the last few degrees of closing, in order to be able to overcome any resistance, such as seals, latch bolts, etc.

Delayed action

The closing speed of the door is reduced to minimal or the door stops, for a preset period, to allow passers-by sufficient time to pass through the door opening. i.e. Elderly persons, Hospital staff with beds, etc.

Hold open

This is a device to enable the closer to be held in the open position, usually at 90º, but some are variable in the opening degree. These closers must not be used on fire doors. (except where they are electronically controlled to close when the fire alarm is sounded).

Door stops

Always use a door stop, where practicable, whether a closer has a backcheck or not. This may take the form of a floor mounted version, wall/skirting mounted version or built-in as found with guide rail closers. The positioning of the stop is also important, and must be at least 66% (2/3rds) the door width away from the hinge, otherwise the stop acts as a fulcrum and could damage the door, the frame and the hinges. Where there is a maximum angle of opening stated the stop must be positioned at that point, otherwise damage to the closer will occur.

Note

Please ensure that the correct closing device is the appropriate one for the job it is intended to do and that it is the correct size. Too many closers are under specified, purely in an effort to reduce costs.

Size	Max. door width mm	Min. closing moments N.m
1	750	9
2	850	13
3	950	18
4	1100	26
5	1250	37
6	1400	54

It should be noted that size 3 is the minimum requirement for fire doors.

and produced in the manufacturing plant

K/002
This is coded format and the information is held by the Notified Body

This certificate attests that all provisions concerning the assessment and verification of constancy of performance and the performances described in Annex ZA of the standard(s)

EN 1154:1996/A1:2002/AC:2006

under system 1 *of AVCP* are applied and that

the product fulfils all the prescribed requirements set out above.

This certificate was first issued on **19/11/2019** and will remain valid to the date given below as long as the test methods and/or factory production control requirements included in the harmonised standard, used to assess the performance of the declared characteristics, do not change, and the product, and the manufacturing conditions in the plant are not modified significantly.

Valid to: **30/10/2022**

Certificate of constancy of performance

1121-CPR-AD5100

In compliance with *Regulation 305/2011/EU of the European Parliament and of the Council of 9 March 2011* (the Construction Products Regulation or CPR), this certificate applies to the construction product

Yale 4000 Series Overhead door closer

Intended use: For use on fire rated single leaf and double leaf doors
PARALLEL ARM APPLICATION.

Essential characteristics	Performance	Harmonised technical specification
Self closing 5.2.1 General		EN 1154:1996/A1:2002/AC:2006
5.2.2 Durability	500,000 test cycles	
5.2.3 Closing moment	Pass size 3	
5.2.4 Opening moment	Pass size 3	
5.2.5 Efficiency	>55% size 3	
5.2.6 Closing time	Pass	
5.2.7 Angles of operation	Grade 3, > 105°	
5.2.8 Overload performance	Pass	
5.2.9 Temperature dependence	-15°C to +40°C	
5.2.10 Fluid leakage	Pass	
5.2.11 Damage	Pass	
5.2.12 Latch control	NPD	
5.2.13 Back check (optional)	NPD	
5.2.14 Delayed closing (optional)	NPD	
5.2.15 Adjustable closing force (optional)	NPD	
5.2.16 Zero position (double action door closers only)	NPD	
5.2.18 Fire/smoke door suitability	Pass	
Essential characteristics	Performance	Harmonised technical specification
Durability of Self Closing 5.2.2 Durability	500,000 test cycles	EN 1154:1996/A1:2002/AC:2006
5.2.17.1 corrosion	Grade 4 (240 hours)	
5.2.17.2 corrosion	Pass	
Dangerous Substances Annex ZA3	Pass: the materials in the door closer do not contain or release any dangerous substances in excess of the maximum levels specified in existing European material standards or any national regulations

warrington certification

Certificate of constancy of performance
1121-CPR-AD5100

Produced for

Yale EMEA
School Street, Willenhall, West Midlands, WV13 3PW

and produced in the manufacturing plant

K/002

This is coded form and the information is held by the Notified Body.

This certificate attests that all provisions concerning the assessment and verification of constancy of performance and the performances described in Annex ZA of the standard(s)

EN 1154:1996/A1:2002/AC:2006

under system 1 of *AVCP* are applied and that

The product fulfils all the prescribed requirements set out above.

This certificate was first issued on 12/09/13 and will remain valid as long as the test methods and/or factory production control requirements included in the harmonised standard, used to assess the performance of the declared characteristics, do not change, and the product, and the manufacturing conditions in the plant are not modified significantly.

Overhead door closer
300 series

Light duty power selectable door closer.

Specifications:
- Casted aluminum body
- UL listed
- Non handed installation

Features:
- Rack and pinion mechanism
- Selectable class 2, 3 & 4
- Adjustable closing and latching speed
- Max door width: 1100mm
- Max door weight: 80 kg
- Can be installed with standard or hold open arm and PA bracket
- Hold open type should not be installed on fire doors
- Available in silver, white, brown, black & gold

Overhead door closer
7000 series

CE marked heavy duty power adjustable door closer

Specifications:
- Casted aluminum body
- CE marked
- Non handed installation

Features:
- Rack and pinion mechanism
- Adjustable power size class 2 to 6
- Max door width: 1400mm
- Max door weight: 120 kg
- Adjustable closing and latching speed
- Adjustable back check
- A built-in pressure relief valve protects the closer against abuse
- Can be installed with standard or hold open arm and PA bracket
- Hold open type should not be installed on fire doors
- Available in silver, white, brown, black & gold

Mortice Locks

Yale

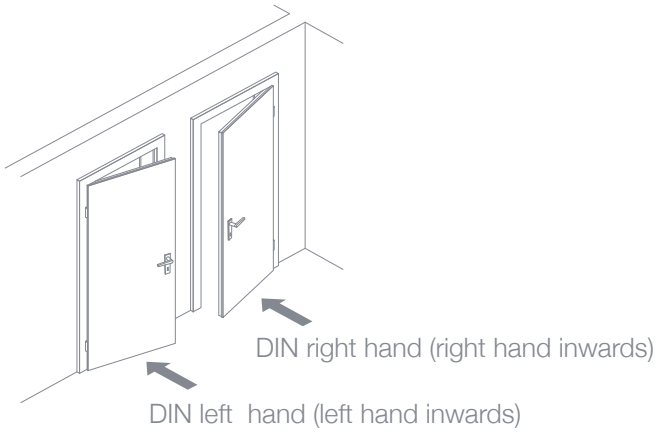
Mortice Locks: Door Direction

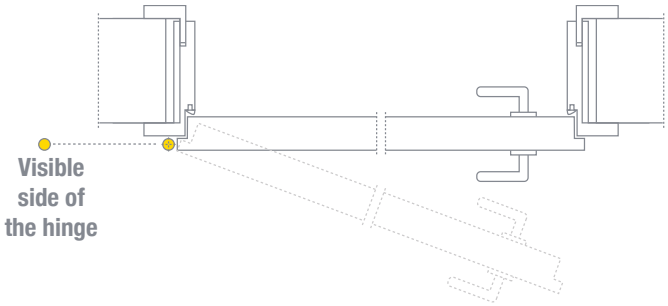
Depending on the pivot direction of a door, a door is classified as a left and right hand door. The door direction or side definition according to DIN 107 is determined as follows:

Visible position of the door hinges on the left = DIN left
Visible position of the door hinges on the right = DIN right

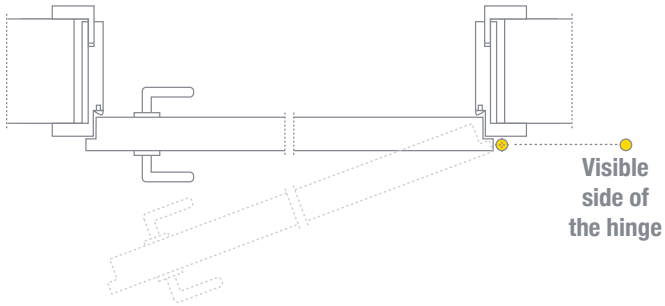
Common definitions derived from the access direction:

In accordance with the door directions, the mortice locks are also classified as DIN left and DIN right hand locks:

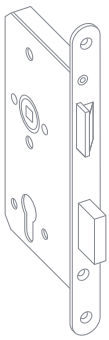




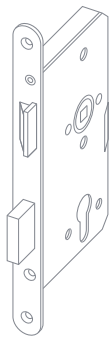
DIN LEFT



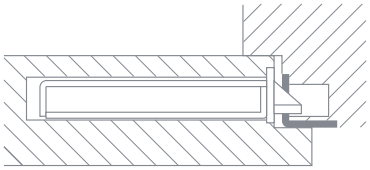
DIN RIGHT



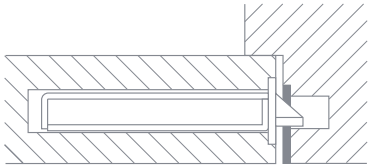
DIN left hand lock (the straight side of the latch points to the left)



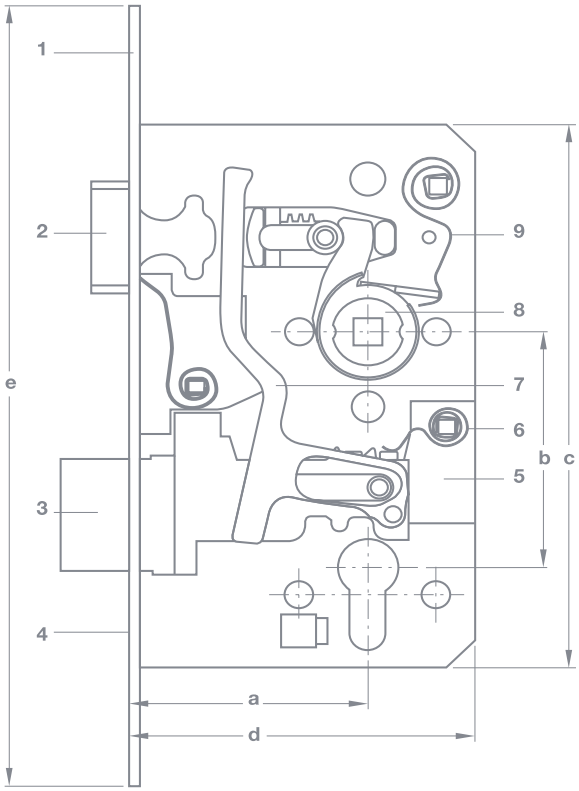
DIN right hand lock (the straight side of the latch points to the right)



Profile of a rebated door with mortice lock (forend protruding on one side)



Profile of a flush door with mortice lock (forend protrudes on both sides)



1 Forend
2 Latch
3 Deadbolt
4 Screw channel for profile cylinder
5 Tumbler
6 Tumbler spring
7 Key action
8 Lever follower
9 Counter spring

a Backset
b Distance
c Case height
d Case width
e Forend length
f Forend width

Scope:

This standard covers the requirement and test methods for durability, strength, security and function of all types of mechanical locks and latches (including associated or separately locking plates), intended for use on pedestrian doors in buildings. Excluding electro-mechanically operated locks and striking plates, multipoint locks and their locking plates, locks for windows, padlocks, locks for safes, furniture locks and prison locks.

Classification:

The standard classifies locks and latches using the 11 digit coding system. Each digit relates to a particular feature of the product measured against the standards performance requirements.

2
(1-3)

Digit 1: Category of use
Classification is in three grades, grade 1 being the lowest

Grade 1: Low frequency. For use by people with a high incentive to exercise care and a small chance of misuse, e.g internal residential doors.

Grade 2: Medium frequency. For use by people with some incentive to exercise care but where there is some chance of misuse, e.g. internal office doors.

Grade 3: High frequency. For use by public or others with little incentive to exercise care and with a high chance of misuse, e.g. public doors

Digit 2: Durability

Twelve grades of durability are identified:

Grade A: 50,000 cycles, no load on latch bolt
Grade B: 100,000 cycles, no load on latch bolt
Grade C: 200,000 cycles, no load on latch bolt
Grade F: 50,000 cycles, 10N load on latch bolt
Grade G: 100,000 cycles, 10N load on latch bolt
Grade H: 200,000 cycles, 10N load on latch bolt
Grade L: 100,000 cycles, 25N load on latch bolt
Grade M: 200,000 cycles, 25N load on latch bolt
Grade R: 100,000 cycles, 50N load on latch bolt
Grade S: 200,000 cycles, 50N load on latch bolt
Grade W: 100,000 cycles, 120N load on latch bolt
Grade X: 200,000 cycles, 120N load on latch bolt

Digit 3 - Door mass and closing force

Nine grades of door mass and closing force are identified:

Grade 1: Up to 100 kg door mass; 50N maximum closing force
Grade 2: Up to 200 kg door mass; 50N maximum closing force
Grade 3: Up to 200 kg door mass or specified by the manufacturer; 50N maximum closing force
Grade 4: Up to 100 kg door mass; 25N maximum closing force
Grade 5: Up to 200 kg door mass; 25N maximum closing force
Grade 6: Up to 200 kg door mass or specified by the manufacturer; 25N maximum closing force
Grade 7: Up to 100 kg door mass; 15N maximum closing force
Grade 8: Up to 200 kg door mass; 15N maximum closing force
Grade 9: Up to 200 kg door mass or specified by the manufacturer; 15N maximum closing force

Digit 4 - Fire resistance

Two grades of suitability for use on fire/smoke doors are identified:

Grade 0: Not approved for use on fire/smoke door assemblies
Grade 1: Suitable for use on fire/smoke door assemblies tested to EN1634-1 etc.

Note 1: A grade 1 classification means only that the lock has been designed for use on fire/smoke control doors; the actual fire performance achieved (e.g. fire integrity of 30 minutes on a partially glazed timber door etc.) will be contained in a separate fire test report.

Note 2: Where a product is intended for fire/smoke use (i.e. “1” in box 4), it must be possible to demonstrate compliance with the Essential Requirements of the Construction Products (Amendments) Regulations. It is recommended that the product should bear the CE mark.

Digit 5: Safety

Only one grade of safety is identified:

Note: A lock or latch conforming to this standard can, at the same time, also be part of an exit device conforming to EN179 or EN1125

Digit 6 - Corrosion resistance and temperature

Eight grades of corrosion resistance are identified:

Grade 0: No defined corrosion resistance; no temperature requirement

Grade A: Low corrosion resistance; no temperature requirement

Grade B: Moderate corrosion resistance; no temperature requirement

Grade C: High corrosion resistance; no temperature requirement

Grade D: Very high corrosion resistance; no temperature requirement

Grade E: Moderate corrosion resistance; temperature requirement: from -20°C to +80°C

Grade F: High corrosion resistance; temperature requirement: from -20°C to +80°C

Grade G: Very high corrosion resistance; temperature requirement: from -20°C to +80°C

Digit 7 - Security and drill resistance

Seven grades of security and drill resistance are identified:

Grade 1: Minimum security and no drill resistance

Grade 2: Low security and no drill resistance

Grade 3: Medium security and no drill resistance

Grade 4: High security and no drill resistance

Grade 5: High security with drill resistance

Grade 6: Very high security and no drill resistance

Grade 7: Very high security with drill resistance

Digit 8 - Field of door application.

Fifteen grades of door application are identified in the table below:

Grade	Type	Application 1	Application 2	Application 3
A	Mortice	Unrestricted application	–	–
B	Mortice	Hinged door	–	–
C	Mortice	Sliding door	–	–
D	Rim	Unrestricted application	–	–
E	Rim	Hinged door	–	–
F	Rim	Sliding door	–	–
G	Bored lock	Unrestricted application	–	–
H	Mortice	Hinged door	Supported	–
J	Rim	Hinged door	Inwards	–
K	Mortice	Hinged door	–	Locked from inside
L	Mortice	Sliding door	–	Locked from inside
M	Rim	Hinged door		Locked from inside
N	Rim	Sliding door	–	Locked from inside
P	Mortice	Hinged door	Supported	Locked from inside
R	Rim	Hinged door	Inwards	Locked from inside

Digit 9 - Type of key operation and locking

Nine grades of type of key operation and locking are identified:

Grade 0: Not applicable

Grade A: Cylinder lock or latch; manual locking

Grade B: Cylinder lock or latch; automatic locking

Grade C: Cylinder lock or latch; manual locking with intermediate locking

Grade D: Lever lock or latch; manual locking

Grade E: Lever lock or latch; automatic locking

Grade F: Lever lock or latch; manual locking with intermediate locking

Grade G: Lock or latch without key operation; manual locking

Grade H: Lock without key operation; automatic locking

Digit 10 - Type of spindle operation

Five grades of spindle operation are identified:

Grade 0: Lock without follower

Grade 1: Lock with sprung lever or knob

Grade 2: Lock with light unsprung lever

Grade 3: Lock with heavy unsprung lever

Grade 4: Lock with manufacturer's own specification furniture

Digit 11 - Key identification

Nine grades of key identification are identified:

Grade 0: No requirement

Grade A: Minimum three detaining elements

Grade B: Minimum five detaining elements

Grade C: Minimum five detaining elements, extended number of effective differs

Grade D: Minimum six detaining elements

Grade E: Minimum six detaining elements, extended number of effective differs

Grade F: Minimum seven detaining elements

Grade G: Minimum seven detaining elements, extended number of effective differs

Grade H: Minimum eight detaining elements, extended number of effective differs

Note: This applies only to lever locks: cylinders are assessed to BS EN1303: 1998

Classification code:

:2:H:5:1:0:E:5:A:F:2:C:

Code shown using DHF graphic icons:
EN12209

EXAMPLE:

This indicates a mechanically operated lock and locking plate intended for use in situations where there is an incentive to exercise care; that will withstand a durability of 200,000 cycles with 10N side load on the latch bolt on a door of up to 200 kg in mass; that will close with a maximum force of 25N; that is suitable for use on a fire/smoke resisting door; that has no safety requirement; that has moderate corrosion resistance over a temperature range of -20°C to +80°C; that has high security and drill resistance; that is suitable for unsprung furniture; and that has five detaining elements with a minimum of 10, 000 differs.

H Series
72mm Sashlock

Specifications:
- Heavy duty sashlock with 72mm centres
- Backset 55mm with option of 60mm on request
- Follower 8x8mm
- Through fixing holes with 38mm centres
- Stainless steel 304 front and strike plate
- Square front and strike plate with option for radius type on request
- Stainless steel 304 latch and deadbolt
- 20mm double throw deadbolt
- Grade 8
- Door Mass upto 200 Kg at max. Closing force of 15N
- 200,000 Cycles Tested

Features:
- Tested to EN12209:2003/AC 2005 - suitable for public doors
- CE certified - suitable for steel fire doors upto 200kg, 240 minutes for metal doors and 120 minutes for timber doors.
- Latch operated by handle or cylinder
- Reversible for left or right hand door

510/520 Series

Specifications:
- Latch operated by both key and handle
- Key operated bolt

Features:
- Forend 23mm with square (520) and round edge (510)
- Centre to centre 85mm
- DIN holes on cylinder
- Backsets 20-70mm
- Flat strike plate included
- Solid brass (510) or painted steel (520) finish
- Fixing screws for lock and strike plate included

- Mechanical bolt operated by key from inside and outside

Features:

- Lock for right and left handed gates;backset 50, 60 and 70mm
- Painted or galvanized steel finish
- Striker included
- Pair of inside/outside cylinders included, 3 keys

Yale®
Knobs and Handlesets

Cylindrical knobsets - Grade 2
Ball design

Specifications:
- Stainless steel or brass material
- Rosette 75mm wide
- Brass cylinder and keys (3 keys)
- Stainless steel latch
- Fixed latch 60mm backset and 70mm available on request
- Suitable for door 35-45mm thick
- Entrance, privacy and passage functions

Features:
- Conforms to ANSI grade 2 requirements
- Reversible for left or right hand doors
- For orders in GCC, please refer to the codes in the chart at the bottom of the chapter

Security deadbolts

Key and turn / Key both sides

Specifications:
- Stainless steel or brass
- Brass cylinder and keys (3 keys)
- Adjustable bolt 60-70mm backset
- Suitable for door 35-45mm thick

Features:
- Key and turn operation or key operation from both side
- Reversible for left or right hand doors

Decorative handle knobset
Raffaello

Specifications:
- Forged brass handle and deadbolt cylinder rosette
- Adjustable 60-70mm backset latch and deadbolt
- Security deadbolt with anti-saw pins
- Latch operated by handle from outside and knob from inside
- Deadbolt operation by key from outside and turn from inside

Features:
- Conforms to ANSI grade 3 requirements
- Suitable for door thickness 35-50mm

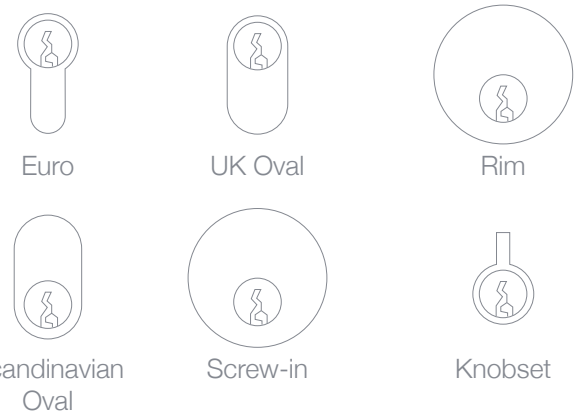
Cylinders

Cylinder Type



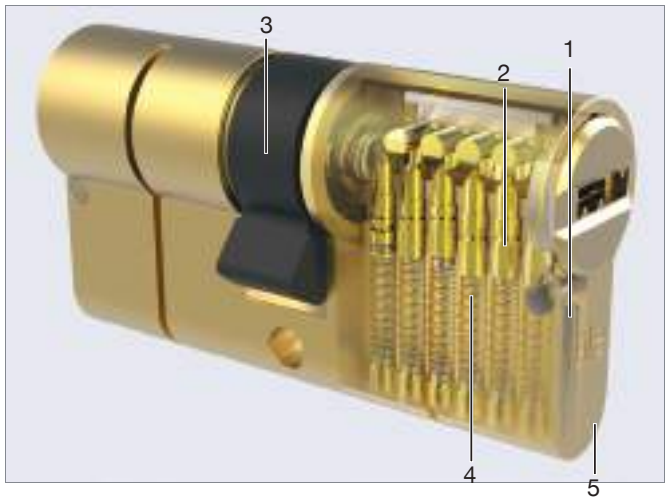
Yale cylinders have the following characteristics:

• Within the profile cylinders, which are variable in steps, pairs of pins trace the key profile.

• Maximum number of key changes results from the number of pairs of pins and the possible versions of steps.

• All cylinders comply with and in major characteristics exceed the requirements of EN 1303 and DIN 18 252: 09/1999

Cylinder Components



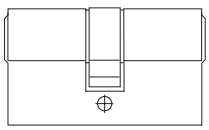
1. Core
2. Core pin
3. Locking pin with spring
4. Housing pin with spring
5. Cylinder housing

Application

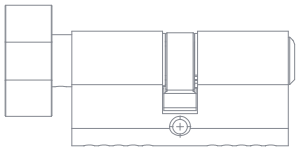
Locking Cylinders are categorized according to:

Front View | **Side View**

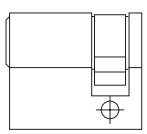
Profile Cylinder



Double Cylinder (key + key)



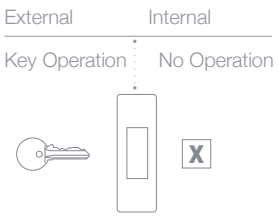
Double Cylinder (key or emergency release + knob)



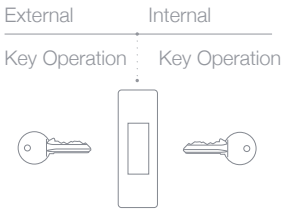
Single Cylinder

The definition of important components and characteristics of locking cylinders in this catalogue follows generally the terminology according to EN 1303 with 18 252/09-1999.

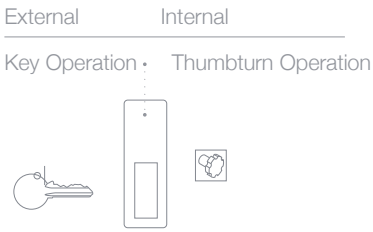
Single Cylinder



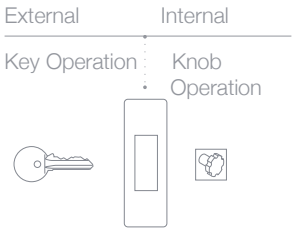
Double Cylinder



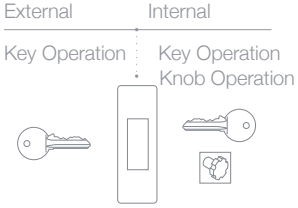
Thumbturn Cylinder



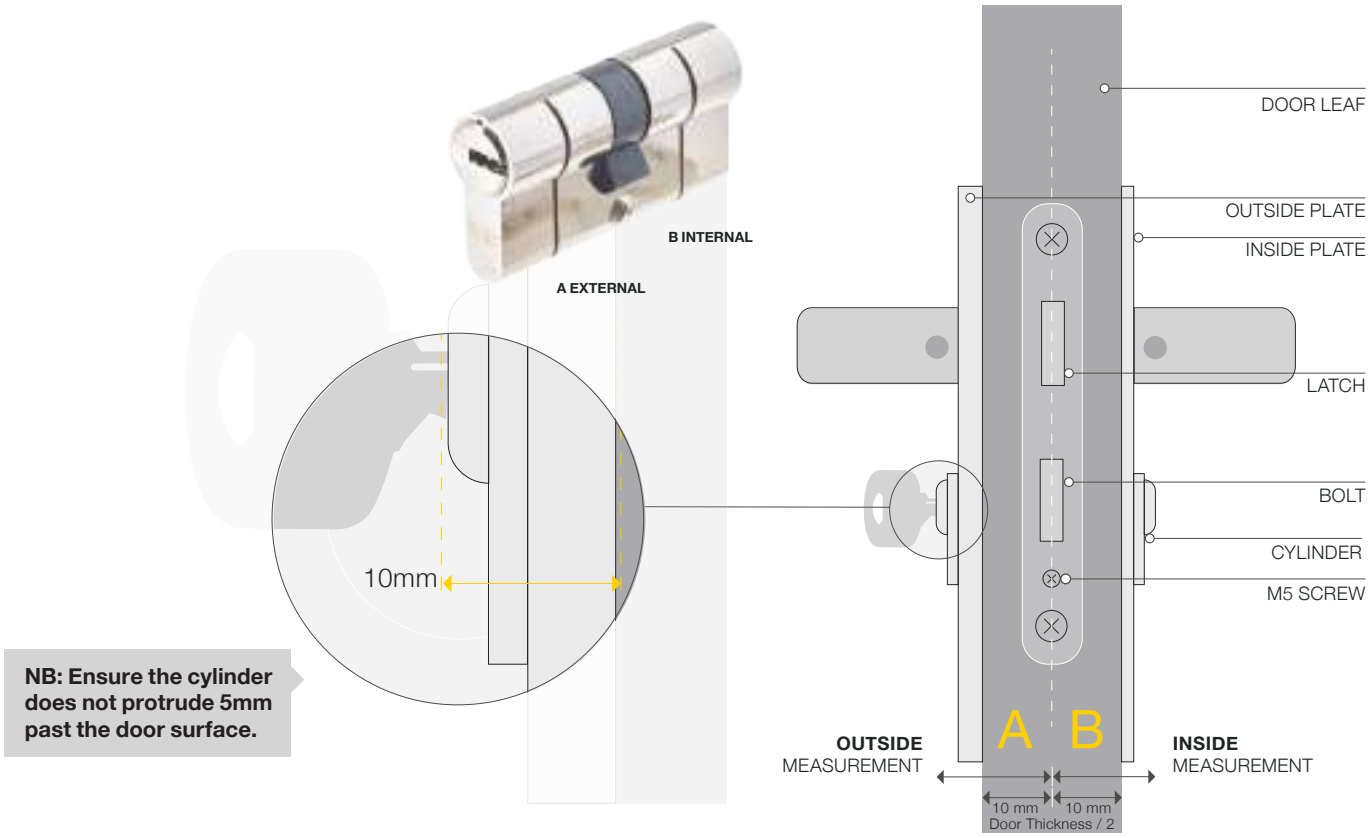
Single Cylinder with Knob



Double Cylinder with Knob and Emergency Release



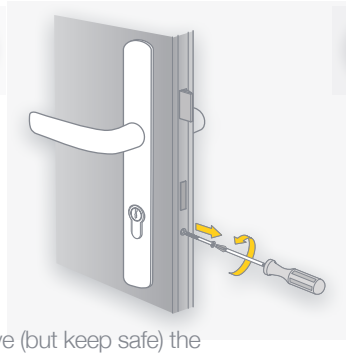
How to Measure Your Cylinder



NB: Ensure the cylinder does not protrude 5mm past the door surface.

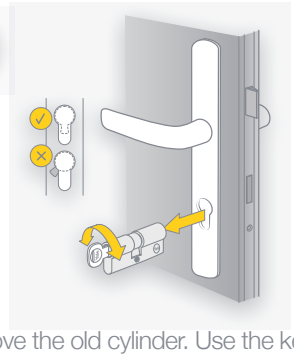
How to Change Your Cylinder

1.



Remove (but keep safe) the screw to release the cylinder.

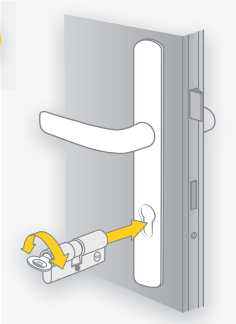
2.



Remove the old cylinder. Use the key to align the cam with the cylinder housing in order to push in/pull out the cylinder

NB: Twist key in both directions to find out where the cylinder cam is.

3.

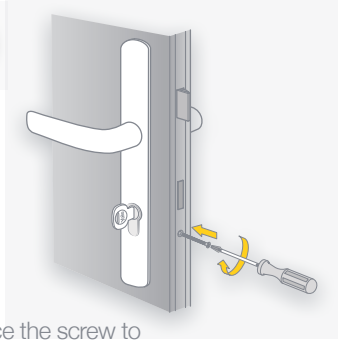


Insert the new Yale cylinder and turn the key to check alignment

4.

Turn the key to the unlock position

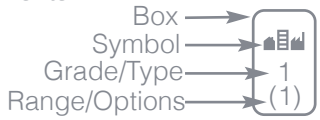
5.



Replace the screw to secure the cylinder

Specification

BS EN 1303: 2005 classifies cylinders for locks using an 8 digit coding system. A broadly similar classification system is used for other building hardware product standards. Each digit refers to a particular feature of the product measured against the standard's performance requirements.



Digit 1 Category of use

One category is identified:

Grade1: Keys shall resist a torque of 2.5Nm and still be usable.

Digit 2 Durability

Three grades are identified according to the number of test cycles achieved:

Grade 4: 25 000 cycles

Grade 5: 50 000 cycles

Grade 6: 100 000 cycles

Digit 3 Door mass

No requirement.

Digit 4 Fire resistance

Two grades are identified as follows:

Grade 0: not suitable for fire/smoke resistant door assemblies

Grade 1: suitable for fire/smoke resistant door assemblies subject to satisfactory assessment of the contribution of the cylinder to the fire resistance of the specified fire/smoke door assemblies. Such assessment is beyond the scope of this European standard (see EN 1634-1).

Digit 5 Safety

No requirement.

EXAMPLE:

The following marking denotes a cylinder meeting the required category of use Grade 1, durability Grade 6 (100 000 cycles), no requirement for door mass, no fire resistance or safety in use requirement, having Grade A corrosion resistance, Grade 4 key related security and Grade 1 attack resistance.

Digit 6 Corrosion and temperature resistance

Four grades are identified as follows:

Grade 0: no corrosion or temperature resistance requirements

Grade A: BS EN 1670 Grade 3 corrosion resistance (96 hours NSS): no temperature resistance requirement

Grade B: No corrosion resistance requirement: resistance to -20 / +80°C temperature extremes

Grade C: BS EN 1670 Grade 3 corrosion resistance: resistance to -20 / +80°C temperature extremes

Note:

- No distinction is made between the inside and the outside of either the cylinder and/or the door.
- On completion of the test, the cylinder must operate using a maximum 1.5 Nm torque on the key.

Digit 7 Key related security

Six grades are identified and the principal requirements are summarised in Table 1 below:

	Grade					
	1	2	3	4	5	6
Minimum number of effective differs	100	300	15.000	30.000	30.000	100.000
Minimum number of movable levers, pins, discs, etc	2	3	5	5	6	6
Coding on key could disclose combination	Yes	Yes	No	No	No	No
Torque resistance of plug	2.5Nm	5Nm	15Nm	15Nm	15Nm	15Nm

Digit 8 Attack resistance

Three grades are identified and the principal requirements are summarised in Table 2 below:

	Grade		
	0	1	2
Resistance to drilling (net drilling time)	-	3 mins	5 mins
Resistance to chisel attack (number of defined blows)	-	30	40
Resistance to twisting attack (number of defined twists)	-	20	30
Resistance to plug/cylinder extraction (pull load)	-	15 kN	15 kN
Torque resistance of plug/cylinder	-	20 Nm	30 Nm

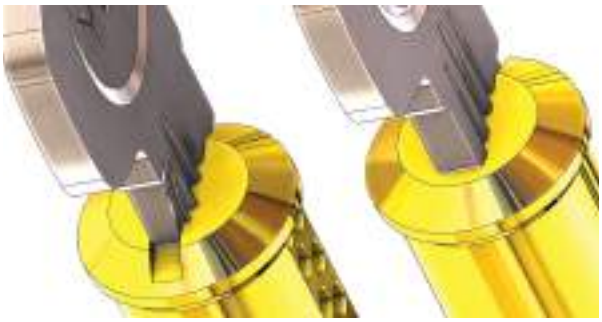
Your Advantages

- The blank keys for patented cylinder are controlled by Yale and can only be cut by authorised dealers
- Security card for proof of ownership for extra keys (1000/1500/2000 + series)
- Key blanks are not available in the high street
- Patent protection
- Conforms to EN1303:2015



Patented

Non-Patented

The Yale non patented cylinder - the front face of the plug creates a stopper for the key shoulder. On the patented version there is a bottom groove that makes a stopper for the key shoulder to fit. Therefore, a non patented key would not fit in a patented cylinder.

There is a clear difference between key shoulders of these two versions too. The non patented one has a key shoulder of the full key thickness while the patented one's shoulder is reduced to 1.75 mm.

Why buy Patented Cylinders?

Protection against unauthorised key duplication
The security of any keyed system can quickly be compromised if keys are lost or not returned. Controlling who has access to keys can be further compromised if key blanks are available on any high street. The blank keys for patented cylinder are controlled by Yale and can only be cut by authorised dealers. With our 1000, 1500 and 2000 series patented cylinders, you will be required to present your key order card to your authorised dealers for key duplication.

Patent protection Our cylinders are protected by the following patent: EP1523603B1

Higher security than any other cylinder Our range of patented cylinders offers enhanced resistance to picking, drilling and other forms of lock manipulation.

Anti-picking protection Anti-picking protection is provided by special pins inside the cylinder.

Anti-drilling protection Special pins also provide anti-drill protection.

Snap protection Security is not compromised even if cylinder is attacked through snapping.

500 Plus series – Euro profile cylinder and turn

- Standard Euro Profile Cylinder – 5 pins
- Available in polished brass and satin nickel, chrome & antiqued
- Available as single, double and turn Euro profile cylinder

1000 Plus series – Euro profile cylinder and turn

- Standard security Euro Profile cylinder with dimple keys – 6 pins
- Available in polished brass and satin nickel, chrome & antiqued
- Available as single, double and turn Euro profile cylinder

* When installed with Yale Y2G-HSLL Security Handle

2000 plus series – Euro profile cylinder and turn

- High security Euro profile cylinder with dimple keys – 10 pins
- Available in polished brass and satin nickel, chrome & antiqued
- Available as single, double and turn Euro profile cylinder

* When installed with Yale Y2G-HSLL Security Handle

600 Plus series – Euro profile cylinder and turn

- Standard Euro Profile Cylinder – 6 pins
- Available in polished brass and satin nickel, chrome & antiqued
- Available as single, double and turn Euro profile cylinder

1500 Plus series – Euro profile cylinder and turn

- Standard security break secure Euro profile cylinder with dimple keys – 6 pins
- Available in polished brass and satin nickel, chrome & antiqued
- Available in double and turn Euro profile cylinder

Double Euro Profile Cylinders
1500 Series

Specifications:
- Double euro profile cylinder - Key + Key
- Medium security
- Brass Material
- Tested to EN1303:2005
- Size available from 54mm - 100mm
- Finish available - Satin Nickel, Polish Brass, Antique Brass, Chrome Polish
- Type: Entrance, Bedroom Function

Key Highlights:
- Yale patented
- Dimple key
- 6 pins
- Supplied with 5 keys
- Key code card
- Anti drilling
- Anti picking
- Reversible keys
- Drill protection
- Anti breakage

Double Euro Profile Cylinders
1000 Series

Specifications:
- Double euro profile cylinder - Key + Key, Key + Knob
- Single euro profile cylinder - One side key
- Medium security
- Brass Material
- Tested to EN1303:2005
- Size available from 45mm - 140mm
- Finish available - Satin Nickel, Polish Brass, Antique Brass
- Type: Entrance, Bedroom Function

Key Highlights:
- Yale patented
- Dimple key
- 6 pins
- Supplied with 5 keys
- Key code card
- Anti drilling
- Anti picking

Double Euro Profile Cylinders
500 Series

Specifications:
- Double euro profile cylinder - Key + Key, Key + Knob, Knob
- Single euro profile cylinder - One side key
- Standard security
- Brass Material
- Tested to EN1303:2005
- Size available from 54mm-100mm
- Finish available - Satin Nickel, Polish Brass, Polish Chrome, Antique Brass
- Type: Entrance, Bedroom, Bathroom function

Key Highlights:
- Regular key
- 5 pins
- Supplied with 3 keys

PATENTED REGULAR 5 PIN 3 ANTI-PICK

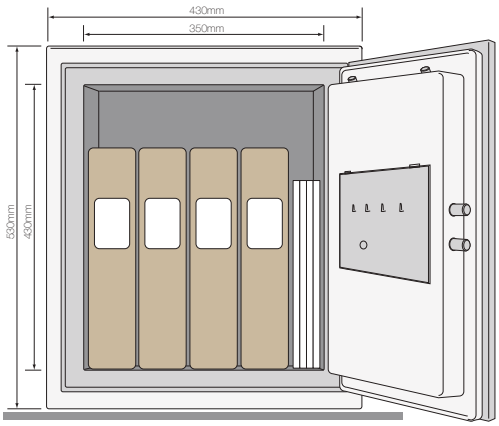
Safes

Fire safes

YFH/530/FG3 - Fire and security safe

Specifications:

- Up to 1 hour fire protection for documents
- High security lock with hardened steel plates protecting the mechanism from attack
- Four heavy duty locking bolts plus two back-end bolts protecting the hinge side
- Heavy duty hinges protected with 18mm fixed bolts
- Adjustable internal shelf
- Epoxy sealed shell of galvanised steel gives double rust protection
- Tested & accredited according to sold secure silver security standard
- Volume 49.4 Litres



Features:

- Keypad illuminates when touched
- Re-settable 3–12 digit user code
- Programmable one-time user code - ideal for visiting guests who may need to use the safe for a short period
- Privacy number input – real code followed or preceded by random numbers opens the lock. Assists if you suspect your code is being observed by an onlooker
- Silent input – code can be entered without noise or light
- Time lock (if wrong code entered) can be set from 3 to 9 minutes (factory set 3 minutes)
- Lock-down period can be set from 1 to 48 hours. Safe can be shut down and cannot be activated for a given period
